

Parinith Reddy

Hyderabad, India – parinithreddymav@gmail.com – +91 8328534237
[LinkedIn](#) – [GitHub](#) – [Portfolio](#) – [LeetCode](#) – [Codeforces](#)

Education

B.Tech in Electronics and Communication Engineering

2024 – 2028

National Institute of Technology, Delhi

CGPA: 8.4 / 10.0

Technical Skills

Languages: C++, Python, JavaScript, TypeScript, SQL, HTML5, CSS3

Backend: Node.js, Express.js, Meteor.js, Convex, Supabase, RESTful APIs

Frontend: React.js, Next.js, Vite, Astro, Tailwind CSS

Databases: Convex, MongoDB, PostgreSQL

Tools & Platforms: Clerk, Firebase Auth, Playwright, Docker, Kubernetes, Git, Render

Experience

Open Source Contributor – [Penpot](#)

June 2026 – Present

- Fixed UI layout and spacing bugs across the libraries panel, templates carousel, viewer login modal, layer search navigation, fonts page, and resizable sidebar.
- Shipped 7+ targeted frontend fixes improving empty-state centering, header/fade behavior, and component alignment across the design tool's interface.

Frontend Developer – NIT Delhi Software Development Cell

Feb 2026 – Present

- Improved application functionality and developer experience by fixing bugs and enhancing features.

Projects

Nest – Reddit Collections Browser Extension [GitHub](#) – [Demo](#)

June 2026 – present

TypeScript, React, Vite, Express, Chrome Extension API, Tailwind CSS

- Built a Manifest V3 Chrome extension that injects a one-click save button into Reddit's feed, letting users sort posts into custom collections without leaving the page
- Architected a full-stack dashboard (React/Vite frontend, Express API) shared between a standalone web app and the embedded extension UI, with sorting, filtering by content type, and a custom icon library for organizing collections
- Implemented local-first, account-free storage with zero external servers and built a JSON export pipeline so users can back up or migrate their entire saved library on demand

Audify – Music Recommendation Platform [GitHub](#) – [Demo](#)

Feb 2026 – Apr 2026

Jupyter Notebook, Python, JavaScript, React.js, Flask, scikit-learn

- Built a full-stack music discovery platform that recommends personalized Hindi songs using ML-powered content-based filtering across 3,883+ songs
- Engineered content-based recommendation engine using TF-IDF vectorization and cosine similarity to compute top 50 personalized song suggestions from song metadata
- Developed intelligent search system implementing dual ML pipelines for contextual queries with millisecond-latency recommendations deployed on Render

Certifications & Achievements

- Achieved 1000+ rating on Codeforces through consistent participation in competitive programming contests.
