Education

B.Tech in Electronics and Communication Engineering (AI & ML - Minor) *2024 – 2028*
National Institute of Technology, Delhi
CGPA: 8.4 / 10.0

Technical Skills

Languages: C++, Python, Go, JavaScript, TypeScript, SQL
Frontend: React.js, Next.js, HTML5, CSS3, Tailwind CSS, Framer Motion
Backend: Node.js, Express.js, FastAPI, Flask
Databases: PostgreSQL, MongoDB, MySQL
Authentication & Cloud: OAuth 2.0, WebAuthn (Passkeys), Clerk, Firebase, Convex
Tools & DevOps: Git, GitHub, Docker, Kubernetes, Linux, Figma, Vercel

Experience

Open Source Contributor – Penpot *June 2026 – Present*

- Built and enhanced core UI functionality including resizable sidebars, keyboard-driven layer search navigation, template carousel behavior, and reusable interface components used across the application.
- Resolved layout, responsiveness, and interaction issues across several modules, improving editor usability, visual consistency, and overall user experience for the open-source design platform.

Projects

Orbital – Social Gaming Hub GitHub – Live *June 2026 – Aug 2026*
Next.js, React, TypeScript, Convex, Clerk, PeerJS, Zustand, Tailwind CSS

- Designed a unified social platform combining encrypted voice/video calls, 1:1 direct messages, and group chat rooms into a single interface with a custom-crafted UI, using WebRTC's DTLS-SRTP for end-to-end encrypted media over PeerJS.
- Fused the communication layer with a live multiplayer gaming hub by embedding *Anomaly*, a real-time party game with server-authoritative turn order and scoring, directly into chat rooms so players can talk, call, and compete without switching context.

GATEquest – GATE Exam Preparation Platform GitHub – Live *May 2026 – July 2026*
Go, React, TypeScript, PostgreSQL, Redis, Chi, Tailwind CSS

- Built a full-stack GATE prep platform with subject-wise roadmaps and an MCQ/MSQ/NAT question bank, backed by a Go/Chi REST API and a cron scheduler that auto-opens and auto-closes timed quests.
- Added Pulse, a real-time community feed with hashtag channels and SSE-streamed debrief chat, using Redis-backed leaderboards for live contest rankings and WebAuthn passkeys for passwordless login.

Nest – Reddit Collections Browser Extension GitHub – Live *Feb 2026 – Apr 2026*
TypeScript, React, Vite, Express.js, Chrome Extension API, Tailwind CSS

- Built a Manifest V3 Chrome extension that lets users save and organize Reddit posts into custom collections directly from the feed, via a shared React/Vite dashboard and Express.js API.
- Designed a local-first, account-free architecture with zero external servers, using JSON export/import for portable backup and migration of saved collections.

Achievements

- Achieved 1200+ rating on Codeforces through consistent participation in competitive programming contests.
